

Adding a Patient

There are many ways patients can be added to Amplitude. They may come through on your Enterprise Interface, be added by the patient themselves using self registration in clinic or added directly by a delegate or consultant. This is how to add a patient directly, please note, if you do not enter an email address or consent to contact we cannot automate the collection of outcome data.

Click the Add Patient button.

Fill in the patient's details.

The system will automatically search for any existing patients whose details match, this is to reduce potential duplicate records.

If there are no existing patients that match the details, click 'Create a New Patient'.

Create a New Patient Cancel

Mandatory fields required to add the patient are highlighted in red.

Once you have added as much detail as possible click 'Create a New Patient'.

You will then have the option to put the patient on a pathway.
