Amplitude *pro enterprise*™ is the first product to give an accurate, **'whole picture' view** of your department or hospital's performance. The platform captures and reports on clinical outcomes for all patients or just specified groups e.g. registry patients or specific studies.

Amplitude *pro one*™ is the same platform but designed for first use by individuals and small teams, giving you a detailed **'whole practice' view** of all your patients' outcomes regardless of location or funding.

What makes Amplitude unique is the vast amount of **pre-loaded clinical data** enabling users to easily add appropriate and accurate **case mix adjustment** and monitor the progress of your patients, picking up deviations from expected recovery and any post intervention complications.

Being web based, the system gives patients the freedom to complete scores online, anywhere and on any device, whilst the clinicians' dashboard gives clinicians the ability to quickly input treatment and patient specific data. **All data is retained locally** and available in near real-time for reporting and analysis.
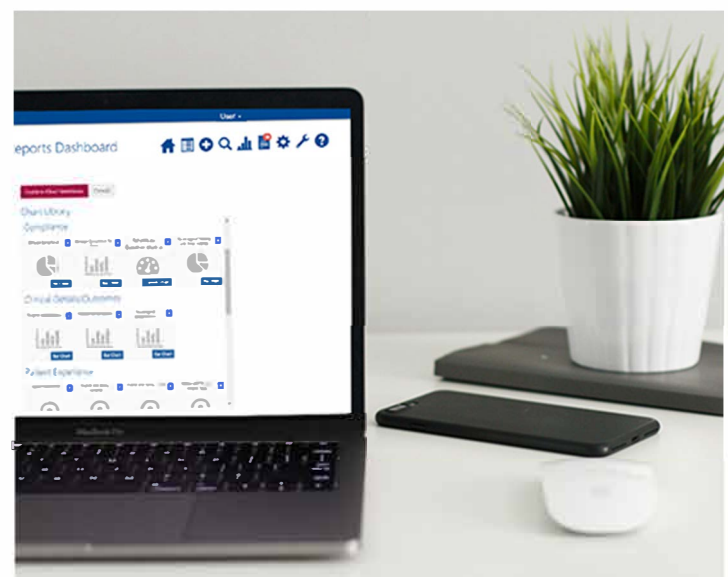

Amplitude specialises in the collection of electronic PROMs and clinical outcomes and we are the leading supplier of electronic PROMs to the NHS. **We are accredited by NHS Digital** for the electronic capture and upload of National PROMs. Our platforms have achieved the highest levels of IG compliance and our data centres are ISO27001 certified.
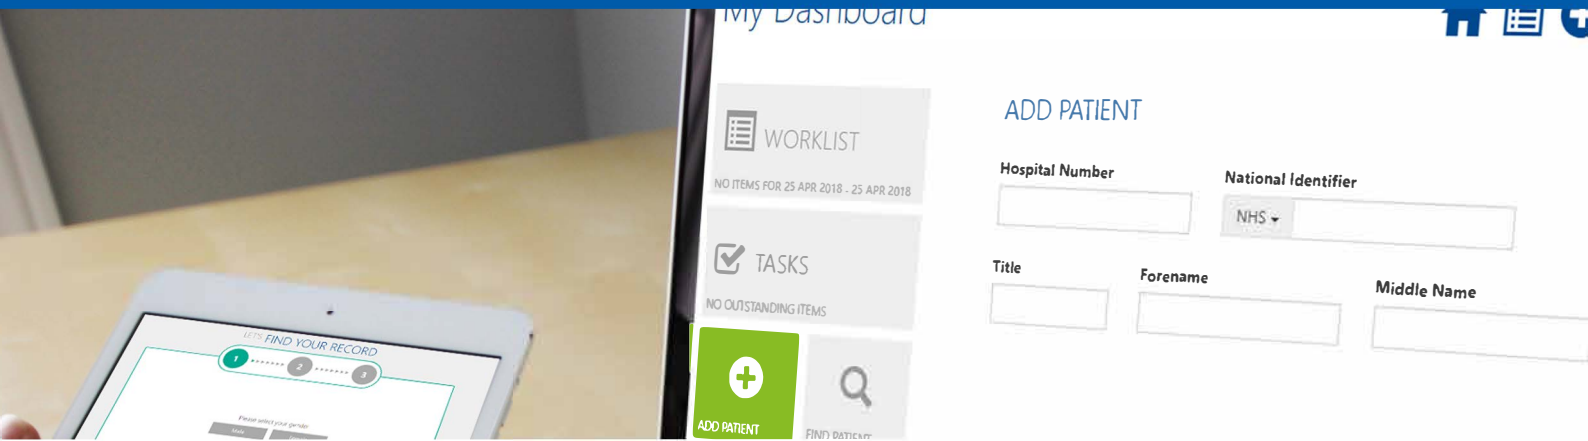

All Amplitude run registries, National PROMs and NJR data collected within the system is sent digitally to the relevant recipient meaning data is retained for local reporting and analysis whilst **compliance to registry submissions** is maintained.

Amplitude is the only system that **captures both National PROMs and NJR data** in the same platform, giving you direct linkage of this key data immediately it is entered into the system.

Our systems are designed to support clinicians and add value, giving you easy access to analysis and self-monitoring tools. Both *pro one*™ and *pro enterprise*™ can be used to generate **revalidation reports**, quickly and easily, taking away the administrative drudgery of maintaining and producing these.

The system **automates the process** of data collection via a series of reminders sent to patients via email and SMS. These reminders are triggered from the intervention data which at minimum includes procedure/intervention description and diagnosis.

We work with our customers to **configure and set up** the system to suit **your specific requirements** and objectives.

We match data input points to your workflows and those of your admin support staff to help ensure data entry for you and your patients is not onerous and encourages the **highest levels of compliance.**

We understand the challenges you are likely to face and how to address them, such as:

- Engaging surgeons and keeping them motivated to use the system
- Time constraints on data entry and making the switch to digital
- Engaging patients and managing compliance
- Administrative overheads and how to minimise these
- Keeping data clean and valid
- Maintaining long-term momentum

We work with you to make your *pro enterprise*™ platform a success. This includes:

- Making the collection of clinical outcomes part of your everyday workflow; not an add on
- Identifying patient touch points to optimise data collection
- Setting up an interface with your practice management system or PAS to lower administration input
- Showing users how to tailor operation note templates to meet their individual requirements
- Setting up user defaults to reduce data input time
- Ensuring any registry uploads are set-up to be synched with the required registries, negating the need for duplicate data entry and ensuring compliance to registries
- Identifying internal resources to support users and monitor compliance
- Setting up report templates so you get something BACK

The Result

- Representative, accurate and meaningful data
- Insight into your clinical outcomes
- Control of your data
- Patient compliance
- Evidence of the levels of care you provide
- Simple reporting for appraisals and revalidation
